

WHY SHOULD YOU INVEST IN A CLOUD-BASED PHONE SYSTEM?

COST-EFFECTIVE ALTERNATIVE TO TRADITIONAL PHONE LINES.

In addition to internet services, you only have to pay for the cloud system setup costs and the monthly payments. Local and international calls cost less because both course through the internet. And you don't have to pay for hardware maintenance like you would for a traditional phone system.

THE CLOUD PROVIDES RELIABLE AND CONSTANT COMMUNICATION NO MATTER WHAT YOUR BUSINESS SIZE

A cloud-based phone system is not tied down to a single location so you can communicate with customers and employees anytime and anywhere you have internet access. Some companies, like Lingo, offer *free* phones when you sign up!

GAIN MORE SECURITY FROM A CLOUD-BASED PHONE SYSTEM THAN FROM A TRADITIONAL SYSTEM.

To improve security for you and your business, a cloud-based phone system pays close attention to risks. The cloud features various security measures like data encryption, network security, and voice and video security.

CLOUD-BASED PHONE SYSTEMS GIVE YOUR COMPANY MORE ROOM TO GROW.

The cloud lets you grow your phone system based on the size of your business. You can add phone lines without worrying about cd on-site equipment that you would fuss over. If you stick to traditional phone lines, scalability is never an Issue!
