

Stay Connected Everywhere with Virtual Telephone Number

What if you could have a presence everywhere your customers reside, stay connected to your business anywhere you go and have a built-in fail safe in the event the unexpected happens? You can with Virtual Telephone Number (VTN). VTN gives you all this and more without the high costs typically associated with Remote Call Forwarding. VTN can be added to both basic telephone service and VoIP solutions.

Here's How VTN Generates Revenue For Your Business

WHEN OPPORTUNITY KNOCKS, MAKE SURE SOMEONE ANSWERS

You have employees that are on the road a lot. They do a good job of checking their office voicemail whenever they can, but what about the opportunities they are missing?

Your office road warriors can re-route their calls or set up Simultaneous Ring and have their calls ring at up to 10 devices when they are on the road. Now they are always connected and opportunities don't slip through the cracks.

CUSTOMER SAVINGS. CUSTOMER LOYALTY

Your customers are complaining about having to incur long distance charges every time they call to do business with you. You need to keep costs competitive so you don't lose business to the competition.

Get a local VTN so your customers can call a local number. Keep your customers happy and coming back to do more business with you.

EXPANSION WITHOUT THE COST

You are ready to grow your business and expand into other markets but don't want the overhead of establishing a physical location.

Get a local number and redirect it to the corporate office. Now you don't have the expenses and problems associated with having a traditional brick and mortar presence.

A PLAN B THAT WORKS

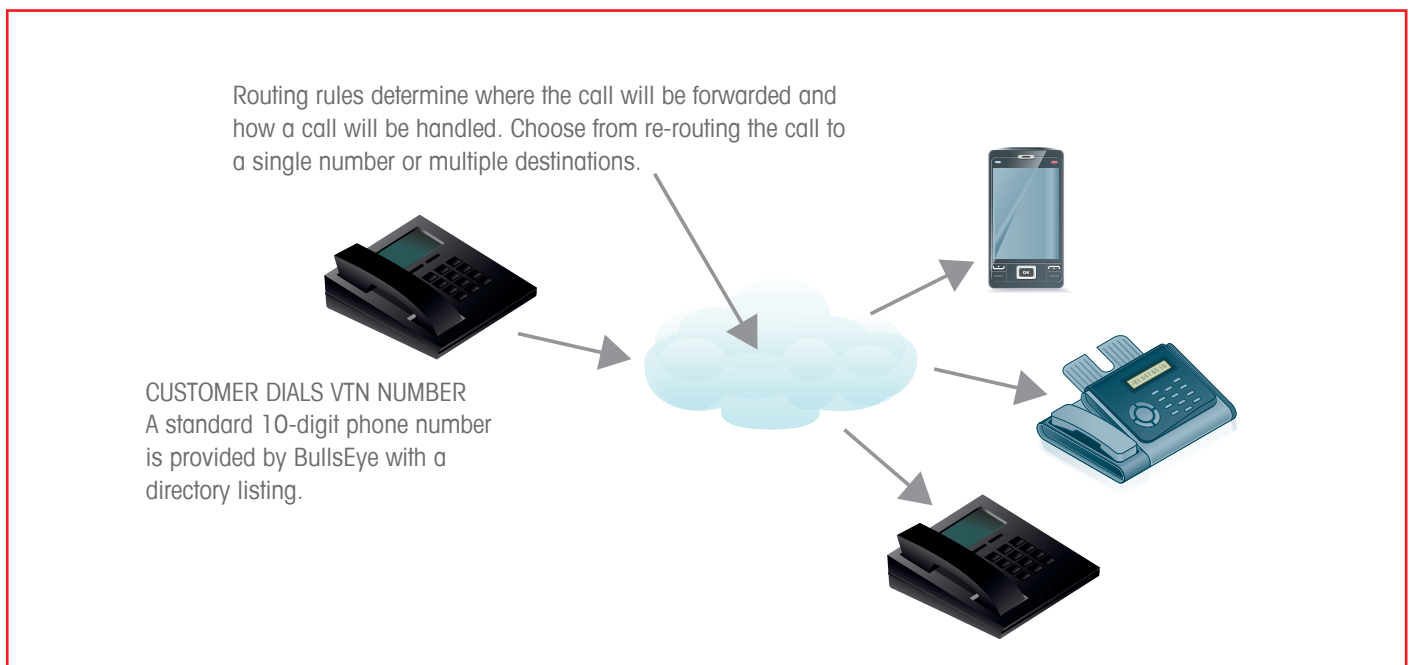

Do you have a plan in place if your phones and Internet stopped working?

VTN allows you to change the path of your number on the fly if disaster strikes. Re-route your number to ring at an unaffected location, a cell phone, or even a home number so the lines of communication never go down.

What is VTN Anyways?

Virtual Telephone Number (VTN) is a phone number that resides in the cloud. Choose from local numbers that can be re-routed to your cell phone, home phone and office phone so you always stay connected. VTN provides a low-cost nationwide business presence since you don't have to physically be where the number points so both you and your customers enjoy greater savings and convenience.

Here's How it Works

Point. Click. Re-route.

Your VTN options can be managed anywhere an Internet connection is available via your Digital Voice toolbar. Change the call forwarding numbers, Find Me/Follow Me settings or set up simultaneous or sequential ring quickly and easily 24x7.
